FUSION LITE Square Tiles

Introduction

RegaLead's range of fused tiles was first introduced in 2002, offering customers a simple, cost-effective method of creating contemporary decorative designs without the need for expensive fusing equipment. By drawing inspiration from many beautiful and original styles, our collection has grown and developed, showcasing some of the best fused glass tiles available. Several of our selected ranges incorporate unusual elements to stunning effect, such as gold leaf and Murano glass, making our collection as unique as it is striking.

Fused glass has been around since the middle ages, but has really only entered the market for use in decorative glass panels in doors, windows and cabinets in the last 10 years. The long and technical manufacturing process involved in making large pieces of fused art glass made the products expensive and never really available to the mass market. With our range of fused tiles however, we can now offer a luxury product, manufactured using the same traditional techniques, for a fraction of the cost normally associated with fused glass.

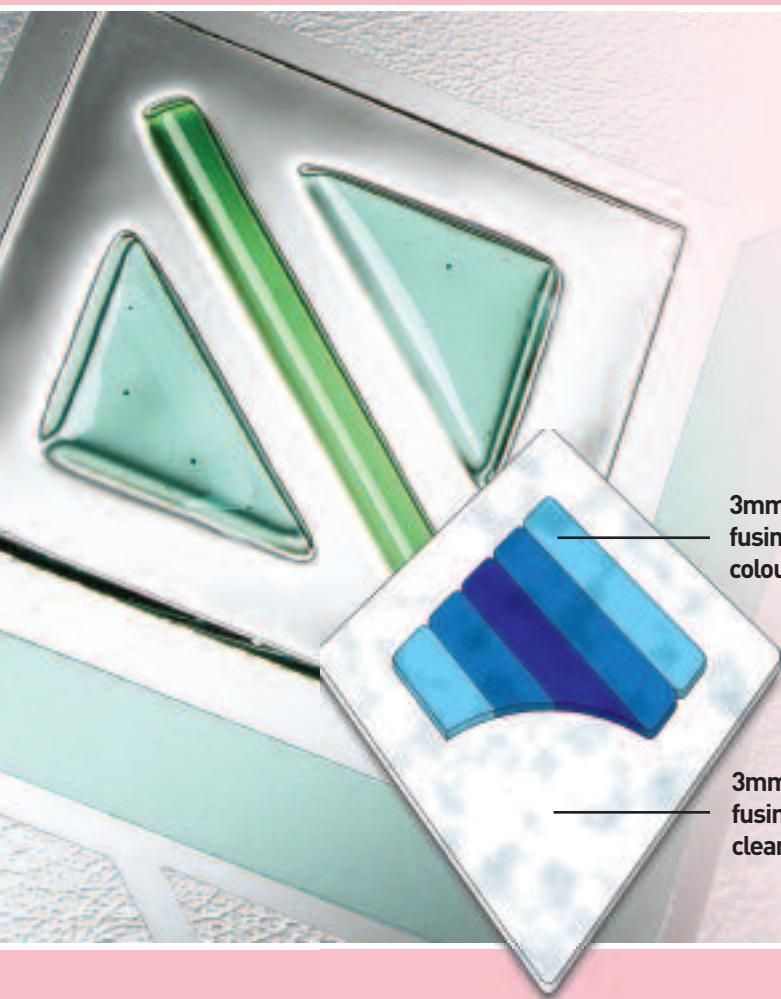

Fused glass is manufactured by slowly heating two or more pieces of glass in a kiln until they start to melt, and then gradually cooling the molten glass in a controlled way so that the pieces anneal and are fused together. To successfully fuse glass, it is essential that glasses which expand at the same rate when heated are used, otherwise long term, the glass can break apart. For this reason we only use fully tested Spectrum™ Glass from the USA in our Fusion and Fusion Lite ranges and Murano glass in the Vetro ranges.

We offer 4 distinct ranges of fused tiles to give our customers the widest range of styles and possible applications...

Made from specialist Spectrum™ Glass, our Fusion range features over 80 designs in complementing colour motifs. Our recent additions to the selection include a new purple range and a collection of clear tiles made from textured glass. These create a stunning 3-dimensional effect and further accentuate the complementing designs. With 6mm thick edges and a polished back surface, our Fusion range of fused glass tiles are perfect for windows and doors, as well as feature pieces on shower screens or mirrors.

3mm Spectrum™ fusing compatible coloured glass

3mm Spectrum™ fusing compatible clear glass

As an accompanying range to Fusion tiles, the Fusion Lite collection is similarly manufactured using high-quality Spectrum™ Glass. The range of over 50 Fusion Lite tiles features either diamonds or squares in several transparent colour designs. As a complement to this, a new selection of opaque neutral colours has now been added to the range. With 2-3mm edges and polished backs, these tiles are perfect for many different applications.

Overlay Lead: the thinner edges give the tiles a sharper shape definition than the standard Fusion tiles so they are ideal for applying adhesive lead around. Designers can now incorporate Fusion Lite into overlay panel designs in the same way as glass bevels.

This range brings a touch of luxury Italian style and provides an alternative array of shapes for fused glass tiles. By drawing on the centuries-old techniques of the glass craftsmen of Venice, Vetro tiles are manufactured in Italy using stunning Murano glass. This beautiful range features a collection of transparent tiles and a complementing selection of tiles which contain pieces of Millefiori. This decorative glass technique is unique to the island of Murano and means 'thousand flowers'.

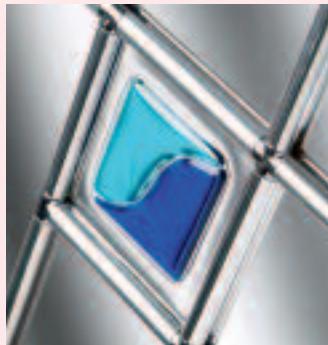

UV Bonding: as with standard Fusion, the Fusion Lite pieces have smooth polished backs so are suitable for UV bonding.

Traditional Lead Cames: the thinner edges also allow the product to be used in traditional lead or zinc cames with a standard 3mm channel. Designers can now effectively combine traditional techniques and contemporary fused glass pieces to create modern leaded light designs

Aluminium Grille Systems:

as the products are dimensionally accurate to within 1mm and have 2-3mm edges, they are ideal for inserting into the increasingly popular decorative grille systems that are available in the market. The angles on the diamonds are 55° and 125° to suit the FBS Profilati grille system.

The newest addition in the fused glass tiles collection, Forma Vidrio is an exquisite range manufactured in Spain. Incorporating beautiful pieces of Gold and Silver Leaf, amongst other elegant motifs, this range comprises of 60mm square and circles in complementary pairs to enhance ease of design.

INOX ELEMENTS

A stunning new addition to the Overlay range, Inox Elements bring a touch of European style to decorative glass. These original features perfectly complement our collection of Fusion Tiles.

Inox Elements

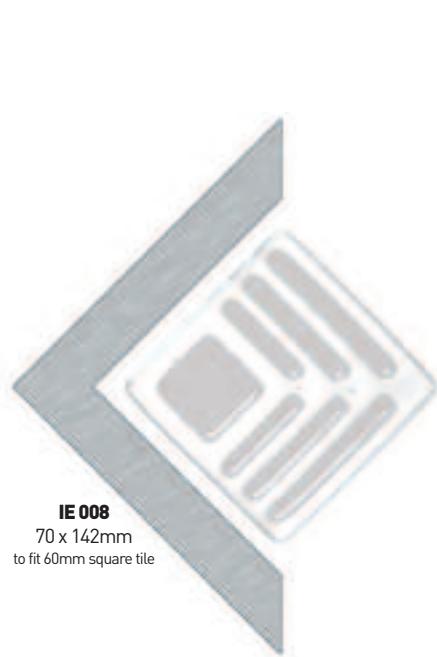

Our new collection of brushed stainless steel Inox Elements are the perfect alternative feature. With three distinct ranges, these 0.8mm thick elements are suitable for both interior and exterior applications. While creatively accentuating our Fusion Tiles, they can also provide a unique focal point in their own right. Select from our beautiful stainless steel, centre cut-out and half centre cut-out ranges.

Technical and Application

Our range of Inox elements are fabricated from the highest quality Stainless Steel, offering great resistance to all weathering in even the most extreme of conditions. We use only 304 grade Stainless which has extensive corrosion resistance when exposed to a range of environments and should withstand even the most harsh cleaning liquids. It is usually reserved as a marine grade stainless that can withstand temperatures up to 425°C.

Inox Elements should be bonded exclusively with RegaBond Inox UV adhesive which has been specially formulated to work with our high-grade stainless steel elements to give a superior and long lasting bond to withstand exterior applications.

Like all Regalead products, Inox Elements have been tested in our QUV testing facilities for resistance to weathering, cycling between humidity and UV for more than 500 hours our products show little or now effect.

All our Inox Elements are precision laser cut to within .01mm with a perfectly flat back and smooth finished edges to give an exact fit every time. Each individual element has a protective film coating that prevents the grained finish becoming scratched, damaged or coming into contact with adhesive during application. The surface of the element has a beautifully grained finish that accentuates the encapsulated Fusion Tile or RegaBevel.

Inox Adhesive

Our Inox adhesive is designed as a low viscosity, wet wipe adhesive for bonding the small stainless steel elements to a glass surface. The adhesive is designed to leave a liquid excess after initial curing which can be easily removed and cleaned off without damaging the finely textured surface of the Inox Elements.

Please note that Inox adhesive is designed for bonding light weight stainless steel elements and is NOT suitable for bonding heavy metal objects or where a load bearing adhesive is required.
